

BHONE PYAE MIN

Computer Engineering • Cybersecurity • AI/ML
Networking • Network Automation

Computer Engineering student with a strong interest in networking, cybersecurity, cloud computing, and software development, backed by an HCCDA – Tech Essentials certification. Currently pursuing a B.Eng. in Computer Engineering with a focus on networking, cybersecurity, and software development. Brings together strong systems and networking fundamentals, cloud and AI/ML knowledge, and a hands-on approach to solving real-world technical challenges.

EDUCATION

2023-Present
Mae Fah Luang University
Bachelor Degree of Computer Engineering
GPAX : 3.39

CERTIFICATION

HCCDA – Tech Essentials
HCIA – Datacom

HARD SKILLS

- Networking and Cyber Security
- Development in Python, JavaScript, Node.js, C#, HTML, CSS
- Applied AI/ML Fundamentals, Generative AI, Gemini API Integration
- Mobile Development in Flutter, Dart
- Cloud computing in Huawei Cloud, Cloud Computing Fundamentals

SOFT SKILLS

- Communication
- Open-mind
- Teamwork
- Leadership
- Problem-Solving
- Adaptability

LANGUAGES

- Burmese — Native
- English — Intermediate
- Thai — Beginner
- Japanese — Beginner

Project Experience

AI-based Automatic Network Configuration
2026

- Developed a network configuration system that uses AI to analyze network requirements and automatically generate and apply configurations, improving efficiency and reducing manual setup time.

Networking • GNS3 • AI/ML • Python • Automation • Docker

AI-Based Study Assistant
2026

- Developed an AI-powered study assistant that helps students understand academic topics, summarize study materials, generate practice questions, and provide personalized explanations, improving learning efficiency and reducing study time.

AI/ML • Python • Gemini API • HTML/CSS • JavaScript • Flask
PostgreSQL/SQLite • Docker

3D Network & Cyber Security Simulator
2026

- Developed a browser-based first-person 3D network simulator that enables users to physically connect Ethernet cables, configure routers and switches through a Cisco-style CLI, simulate network topologies, and troubleshoot connectivity. Built the simulation engine using React, Three.js, and TypeScript, with planned AI Tutor and GNS3 integration.

Three.js • React • TypeScript • Cisco CLI • GNS3

Asset Borrowing System
2025

- Developed a multi-role mobile application that automates asset borrowing workflows for students, staff, and lecturers. Integrated real-time status management (available, pending, borrowed, disabled), automated approval/rejection logic, inventory control tools, and usage history logging to minimize manual setup and operational overhead.

Flutter • Dart • Android • Figma • Role-Based Access
